"Power Good" relay for monitoring the output voltage level

Output voltage is continuously monitored. The units 24 Vdc output FLEX170, FLEX280 and FLEX500 are equipped with Power Good relay. The NO contact triggers any time the output voltage level goes below 20Vdc (24 Vdc output).

This feature is Power particularly useful good in redundant applications.

Applications in compliance with the norm EN 60204-1

FLEX units comply with the norm requirement that an overload of 50% over the nominal current be withstand by the power supply for at least 1 hour to allow the tripping of magneto-thermic switches on the output. These features allows the implementation of "Control of commands and Emergency stops" by means of industrial PCs, PLC, remote I/O, etc. required by the norm. Adelsystem supplies a table for the sizing and length of connecting cables and the choice of proper magnetothermic switches.

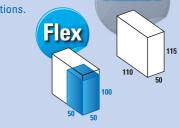

C cartronicgroup

Output circuits protected by magneto-thermic circuit breakers

Standard output circuit breakers can be triggered quickly and reliably with FLEX technology, which allows three times the nominal current at 60°C. Defective current paths are selectively disconnected, the defect is limited and the important parts of the system remain in operation. This together with the 50% overload capacity in compliance with Flex EN60204-1 allows to safely manage any overload and short circuit condition.

Reduced dimensions and snap-on DIN rail bracket

The higher performances obtained with the FLEX! line, allow almost half dimensions as conventional technology and higher performances. An example is Flex6024A 60W with maximum current till 6A. In permanent duty at 40°C it can deliver 3A at 24Vdc. All FLEX units feature the new DIN rail mounting bracket, easy to use and safe against heavy loading and vibrations.

Easy Parallel connection

With FLEX technology it is easier to double capacity. The units FLEX280 and FLEX500 can be easily connected in parallel without needing high precision instruments, but a normal tester. Just remove the jumper and the trick is donel

OAD

ADELSYSTEM

A new way to make and use Power Supplies

Yet another strong proposition by Adelsystem for power supplies and power continuity specialists.

Adelsystem aim is to provide designers and users with a complete range of solutions in power supplies and power continuity products, focusing on both standard and special applications. Our target is to deliver problem-free solutions so that you can safely dedicate your attention to the rest of the automation project.

The FLEX technology is the result of these corner stones of our corporate identity.

Designed taking into account the pressure to optimal use of space, FLEX units are very compact in size. The wide input voltage range allows to have just one article for many applications and minimize stock.

FLEX is based on semi-resonant switching circuit which allows efficiency up to 93% and a very dynamic and robust power supply to a wide range of loads such as PLC, sensors, motors, resistive/ inductive loads, etc.

The FLEX range conforms with the highest quality standards and guarantees a reliable and durable operation with a MTBF up to 500.000 hours and 3 year warrantee.

One solution, many applications

PRODUCT RANGE

DC UPS "ALL IN ONE" C UPS "All In One"DC Power Back Up units. Multi-function devices: power supply, battery charger and back-up module in the same casing together with Adel Battery Care software.

POWER SUPPLY LOW INPUT VOLTAGE Switching power suppy for direct connection to secondary transformer. In 24 Vac. Out 12 - 24 - 48 Vdc Watt: 25 - 460.

AUXILIARY MODULE Decoupling Modules for redundancy applications. Electronic Fuses for Over Load output control, up to 4 cannel.

ADELSystem continues to implement its offering of innovative and functional products as a company specializing in the electrical continuity for the DIN Rail field. The wide range of available products is now involved in the Interconnection field through the ADELBus protocol implemented in the main devices of our products range. Every new device developed comes with

ntegrated Electronic Solutions

DIN rail Switching Power Supplies. Very compact in size, 150% power boost, wide input voltage range 110 - 230 - 400 - 500 Vac. Selectable output protection mode.

DC/DC CONVERTER

SFP SAFETY POWER Power continuity solutions for

alarm systems and fire alarms Available as a fully enclosed device conforming with EN54.4 or as a component to be integrated in other instrumentation.

D-FLEX

High efficiency Power Suppl in Mini Size Dimension for all kind of small power request in a flat control panel. For Domotic, Domestic and Industrial field.

INTERFACES

Wide range of passive interfaces units for Input and Output connections, for PLC and CNC machine.

POWER VIEW GRAPHIC Robust Display wide viewin

angle 3.5" TFT, ADELBus network. Gateway for Ethernet in Modbus TCP and SNMP.

The Best generation of Battery Charger with 4 level of charge. Auto Diagnosis system inside. One product for all battery types

BATTERY BANK

Power Storage Devices, for connection to DC Ups Products Battery size: 1.2; 3; 7,2; 12 Ah, 24 Vdc

ADEL VIEW SYSTEM

Suite for remote monitoring and management devices connected in an ADELBus network. Features: PC software; iOS and Android; Cloud latform: Advanced features for installation and demonstration purposes.

INNOVATION AND MULTIMEDIALITY

ADELBus inside. The Power Continuity products ADELSystem are enhanced by Multimedia devices like Display and Software APPlications for the new way towards Industry 4.0.

These, are innovative solutions has been developed by the ADELSystem R&D team for the expert electrical designer and the user who need to change their point of view in

the search of innovation. ADELBus, the ADELViewsystem and the ADELViewgraphic are the connecting elements to DC Ups, Power Supply and Battery Charger for catching all of the parameters inside the device. All of this, to involve you into a new evolution of Actions both for today and next-future life.

More flexibility in input voltage

The power supplies FLEX90, FLEX170 and FLEX280 B are suitable to a wide range of input voltage. With a single type it is therefore possible to meet the requirements of more applications and consequently improve design activity and stock management.

flexibility 230 Vac

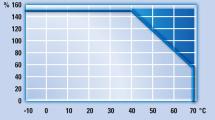

More power: "Power Boost"

As an example, Flex17024A is a 24Vdc power supply that features a continuous duty current of 5A at 60°C and a Power Boost of 150%, equivalent to 7,5A, for at least 3 min. This features allows the use of a smaller size unit to power demanding loads such as motors, solenoid valves, lamps and other loads with transient overload

behavior which would otherwise require an oversize power supply.

Output Power Curve

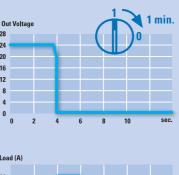

Three modes for output protection.

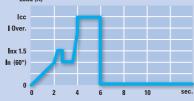

Hiccup Mode Automatic Restart

This is the default factory setting of all FLEX units. In case of shortcircuit or overloading, the output current is interrupted. The device tries again to re-establish output voltage and normal condition about every 2 second till the problem is cleared.

Manual reset manual **Restart by Operator**

In case of short-circuit or overload, the output current is interrupted. In order to restart the output it is necessary to switch-off the input circuit for about 1 minute. This protection mode is particularly suggested in applications where safety procedures require that reset be carried out only by an authorized person.

Inx 1.5 in (60°) 0 2 4 6 8 10 sec.
